

Fuel tank AdBlue specifications

Our road tow fuel tanks have a combination of a 1000L diesel tank and a 200L AdBlue tank in the same unit. The tank is ADR approved and with a solid and robust steel construction with double walls it can be used as a standalone unit. The unit is mounted on a frame with a double axle and a solid nose wheel can be lifted off of it if needed.

The tank has 4 lifting points and forklift pockets for extra mobility and it can be moved when filled with fuel. It has a built-in AdBlue pump and a water- and particle filter in addition to a filler hose and fuel gun.

The fuel tanks has fill- and return connections, a lockable cabinet, fuel level measurement to make the usage as easy as possible and they can be combined with our CAT EU5 generators.

This combination is perfect for applications where high mobility is needed, such as construction sites, events and projects who demands low emissions.

Fuel tank AdBlue

Technical information

Model		AB 1000
Tank size (diesel)	ltr	1000
Tank size (AdBlue)	ltr	200
Type	-	Road tow
ADR approved	-	Yes
Fuel fill connection	-	Yes
Overfill connection	-	Yes
Fuel level indicator	-	Yes
Lockable	-	Yes
Water- and particle filter	-	Yes
Lifting points	-	4
Forklift pockets	-	Yes
Dimensions [LxWxH]	mm	3214x1730x1550
Weight empty	kg	970
Weight with fuel	kg	1990
