About Pon Energy Rental

Powered by Caterpillar

Pon Energy Rental is an internationally operating company that offers rental solutions in power and temperature control. We are part of Pon, a leading family-owned multinational headquartered in The Netherlands with over 15.500 employees.

We provide customized power supply and temperature control solutions for a wide range of industries with temporary energy needs. We are passionate about what we do and strive to offer the highest quality in our solutions and services.

How we work

Every project is unique and we give it our full attention. This is why we sit down with you to understand the specific needs of your project and industry. Our specialists then come up with a proposal that specifically addresses your requirements and wishes. If required, we'll schedule a meeting and a site visit to obtain a clear picture of your needs and situation.

We have a hands-on mentality when it comes to bringing a project to successful completion. We go the extra mile to make it work.

Our services

We offer a wide range of services to take care of all your needs, **we're here for you.**

As part of the global Caterpillar dealership experienced engineers and required components are always nearby and available when you need them.

We make sure that your business can run as usual, without interruptions and downtime. We are always one step ahead, with remote monitoring of the equipment in use.

Our solutions

Whatever power, heating or cooling you need,
we take care of it.

Power

- Prime power
- Back-up power
- Load testing
- Peak shaving
- Contingency planning
- Continuous power
- Offshore/onshore

Heating

- Comfort heating
- Process heating
- Warehouse heating

Cooling

- Comfort cooling
- Process cooling
- Warehouse cooling
- Low temp re Fridgeration

Our power equipment includes:

- Power generators up to 2000 kVA
- Cables
- Fuel tanks
- Distribution gear
- Load banks
- Transformers
- Batteries

Our heating equipment includes:

- Air handlers
- Air heaters
- Air-to-air heat pumps
- Heat pumps
- Hot water systems

Our cooling equipment includes:

- Air handlers
- Air coolers
- Air-to-air heat pumps
- Heat pumps
- Chillers
- Cooling towers

Quality and safety

Everyone's safety matters to us. We design applications that conform to the highest safety standards. Our solutions comply with all regulations and certifications and meet the safety ISO security.

Road tows specifications

Our smart road tows are easy to operate and transport. This is the perfect choice when you have a smaller power need, and need a flexible solution. These generators have a built-in diesel tank, but you can rent a bigger tank on wheels in case you need it.

The road tows have a capacity from 30 to 100 kVA and can easily be switched between 400V and 230V. These generators are equipped with remote monitoring, which gives the opportunity to easily monitor the fuel level, current load and location of the generator.

Power generator specifications

Caterpillar is the largest producer of medium and high speed diesel engines, and its generators are known worldwide for their safety and reliability. We have generators for rental solutions ranging from a simple power set to multi-megawatt installations.

It is heavy-duty equipment with low noise and – alongside base load supply – easy to ramp up and down with soft loading and unloading for peaking power.

Our generators are housed in robust cast-iron 20-foot (diesel only) or 40-foot (diesel and gas) CSC plated ISO containers that are easy to transport by road, sea or air. They are simple to assemble, operate and maintain.

The XQE line provides industry leading fuel efficiency (up to 20% higher) and excellent performance. Ancillaries ensure your power supply meets the highest safety standards, from HV and LV cables and Powerlock connectors to fuel tanks, and 32- to 3200-A distribution boxes.

Load bank specifications

A load bank will give you all the information you need about the performance of your unit or system under full or partial load. We have a range of smaller load bank hire solutions with robust modular chassis/canopy construction for single or three phase testing up to 1000 kW per unit, 10-foot containers for 3000 kW and 20-foot containers for 5000 kW. These units can test AC supplies at unity or variable power factor, along with battery discharge and UPS units.

Our larger units can perform resistive and reactive testing of generators and power supplies, handling up to 480 V and 6 MVA each.

There is 690 V and HV testing without a transformer, and the units can have unity or variable power factor. Multiple units can easily be linked. Housed in robust ISO containers, the units are mobile and come with all the ancillaries you'll need.

Fuel tank specifications

For an efficient operation of our generators we offer a range of ancillaries for rent, including environmentally-safe diesel fuel tanks. Our range of fuel tanks is UN1202 compliant and ADR approved.

They allow environmentally safe supply of fuel to our equipment where an auxiliary source is required, or if the equipment's own internal tank does not allow sufficient running time.

The robust pressure tested containers are equipped with quick release couplings, fork lift pockets and a lockable, vandal-proof access hatch. They ensure safe and secure containment of bulk fuel supplies for generators, heaters and hot water systems.

HV transformer specifications

Our range of multi-tapped transformer rentals convert 400 to 480 V generator set outputs to a number of HV voltages up to 23 kV for distribution. The transformers are housed in CSC Plated 10- and 20-foot containers allowing a multitude of voltage combination to ensure optimal power transmission in all applications.

Our range of modular multi-tapped containerised transformers provides optimum voltage selection across all ranges to enable connectivity to a wide range of networks.

Complete package with full high voltage and low voltage protections. You can hire a transformer for everything from small-scale projects to a major plant.

Whether compensating for planned or sudden power shutdowns, or for seasonal changes in power demands. Our transformer rental equipment is also suitable for event power and for new construction and extensions. The modular units are safe and reliable.

They are efficient so have minimum effect on the environment. They use a mix of dry and oil cooling. The high-voltage outputs can be stepped down for testing with (for example) load banks.

LV transformer specifications

Our range of low voltage transformer rentals convert 400 to 480 V generator set outputs to a number of LV voltages up to 690 V for distribution. We offer a range of inputs and outputs to ensure you have the right voltage for your application.

You can rent a transformer for everything from small-scale projects to a major plant. Whether compensating for planned or sudden power shutdowns, or for seasonal changes in power demands.

Our transformer rental equipment is also suitable for event power, new construction and extensions and load bank testing.

The modular units are efficient so they have a minimum effect on the environment.

Battery power

Battery specifications

Our rental battery units can be used in both onshore and offshore solutions, and on-grid and off-grid solutions since they can convert both frequency and voltage. They can be used stand alone or in a hybrid configuration with a generator, solar or wind application. They are ideal for microgrid applications.

They are also suitable for peakshaving, since they can charge at night when the grid is on low demand, and use the stored power when the power demand is high.

Use them to power your construction site, your event, your excavator, festivals and much more.

The units are equipped with DEIF ASC-4 Battery controllers, a custom PLC and large HMI touch screens to provide easy operation of the units.

Mobile fast chargers

Electric charging

Fast charger specifications

Our new mobile charging stations are specifically designed to optimize charging solutions in the industrial and construction sector. Our mobile EV chargers are a groundbreaking solution that combines mobility, fast charging and intelligent features, making them an essential asset for any industrial facility with a total power output of 360kW.

Designed to meet the needs of industrial environments, our mobile charging stations are equipped with durable and robust industrial-grade components. Whether in production facilities, warehouses, distribution centers or construction sites, our chargers ensure seamless integration into your operational setup and provide a hassle-free charging experience.

We know how important time efficiency is in industrial operations, which is why our mobile EV chargers are equipped with advanced technology for fast charging. With this charging station, you can charge 2 devices simultaneously for a more efficient workday.

Don't let an outdated charging infrastructure stand in the way of sustainable development - harness the energy of our mobile fast chargers and take your industry into an environmentally friendly future.

Offshore solutions

For the offshore industry, we offer solutions that meet the highest standards of safety and reliability. Therefore, our equipment incorporates a variety of safeguards, such as fire, gas, smoke and high-temperature detection. These systems are approved for use in zone 1 and our equipment are approved for use in safe zone. Our engineers are certified for offshore work,

We supply the complete oil & gas chain from exploration to drilling the oil or gas well, to extraction and beyond. We provide offshore equipment for oil rigs, vessels, FSO (Floating Storage & Offloading) and FPSO (Floating Production, Storage and Offloading) vessels and for decommissioning of platforms.

- Load testing
- NORSOK Z015
- DNV2.7-1

**We're here
to help**

Tell us what your challenge is and we'll create the right solution. We'll do that by making sure we define your needs from the outset and then tailoring the solution to suit them. Whether you're looking for emergency or primary power, a reliable back-up solution or a load test, we're here to help.

We'll put all our energy into helping you find the right solution.

Offshore power generator specifications

Our diesel driven offshore generators are manufactured by Caterpillar and are housed in a custom designed offshore rental package comprising of a canopied generator in a DNV 2.7-1 certified lifting frame. The package has been designed to provide flexibility for all types of end user operation. The equipment packages are classified for use in non-hazardous zone.

The key safety features outlined within the XQ power modules are: air shut off, spark arrestor, emergency stop, stainless steel braided fuel lines, anti-static drive belts and 'Yellow Alert' rig ESD. Our offshore equipment range also includes transformers, fuel tanks and NORSOK generators.

Offshore fuel tank specifications

For an efficient operation of our (offshore) generators we offer a range of ancillaries for rent, including efficient and environmentally-safe diesel fuel tanks. Our offshore fuel tanks rental solutions are UN compliant and in conformity with IBC environmental regulations.

They allow environmentally safe supply of fuel to Pon Energy Rental equipment where an auxiliary source is required or if the equipment's own internal tank does not allow sufficient

running time. The robust CSC plated, pressure tested containers are equipped with quick release couplings, fork lift pockets on four sides and a lockable, vandal-proof access hatch.

They ensure safe and secure containment of bulk fuel supplies for power generation and temperature control equipment.

Offshore LV transformer specifications

Our range of low voltage transformer rentals convert 400 to 480 V generator set outputs to a number of LV voltages up to 690 V for distribution. We offer a range of inputs and outputs to ensure you have the right voltage for your application.

You can rent a transformer for everything from small-scale projects to a major plant. Whether compensating for planned or sudden power shutdowns, or for seasonal changes in power demands.

Our transformer rental equipment is also suitable for event power, new construction and extensions and load bank testing.

The modular units are efficient so they have a minimum effect on the environment.

All electric

Air handler specifications

Our air handler units are reliable – and have capacities of 20 to 200 kW to create a safe, pleasant and productive climate in any environment, from offices and schools to hospitals and laboratories. An air handling unit (AHU) produces cool or warm air when connected to chillers, heat pumps or boilers/hot water systems.

You can rent an air cooler to maintain critical temperatures in telecoms server rooms, keep staff and storage areas cool, or perform process cooling in industry. And they are often used in the events industry to cool or heat tents or temporary locations.

The units are safe to operate, are packaged in a complete assembly and feature environmentally sensitive operation. They are easy to transport, and easy to control. There is maximum and minimum air temperature outlet regulation, and automatic selection between heating and cooling.

Air handlers may also be used for liquid cooling, using the cold outside air (free cooling). For areas that require cooling to below zero, for example for cold storage, a low temperature air handling unit can be placed within the area to be cooled.

Air heater specifications

Our portable, indirect oil or gas (option) fired air heaters produce warm air, suitable for space heating (comfort) or process heating (drying). The warm air can be distributed over long distances by our standard flame retardant air hoses, overhead-ducting, blow-out columns or air plenums, or existing air distribution systems on site. Indirect means: fresh ambient air that is warmed up and distributed into the area, is fully separated from the flue gasses coming out through the chimney.

These heaters use latest technology regarding oil or gas burners, resulting in highest efficiencies within the applicable regulations.

Our air heaters should be installed outdoors. All units have thermostatic room temperature control and an easy-to-use control panel.

Air-to-air heat pumps

All electric

Air-to-air heat pump specifications

Our air-to-air heat pumps have a capacity of 50, 75 and 100 kW. These units offer an all-electric solution to condition the climate in your (temporary) location.

Their compact design ensures an optimal flexibility with both a heating and cooling function.

The plug & play units work with the greenest refrigerant available in the market right now (R32). They are equipped with automatic controls which can support you with, for example, CO² monitoring and control.

The units can be used both stand alone and modular. They are mounted in a robust steel frame which makes them easy and safe to transport.

Heat pump specifications

All electric

Our heat pump rental solutions are stand-alone, closed packaged systems. They can supply hot and cold water that is transported through flexible high-pressure hoses to distribution devices.

All our units have a standard design to make assembly, disassembly, installation and maintenance quick and easy. They are easy to transport with a forklift or a crane. They are delivered complete with all the ancillaries and fittings you'll need – like electric cables and water hoses.

Hot water system specifications

Our hot water systems deliver hot water at temperatures up to 90°C for spaces and industrial process heating. These are quiet, high efficiency units with easy control and low emissions. Often combined as a package with air handlers and fan coils, they connect to flexible hoses for remote heating.

Units can be oil or gas powered, with heating capacities ranging from 215 kW to 550 kW using variable speed drive for extra efficient operation. Accessories include gas burners, air handlers, plate heat exchangers, and thermostatic control.

All our units have a standard design to make assembly, disassembly, installation and maintenance quick and easy. They are easy to transport with a forklift or a crane. They of course come complete with all the ancillaries and fittings you'll need.

Air-to-air coolers

All electric

Air cooler specifications

Our air-to-air cooler units produce cold air which is transported through flexible air hoses and distributed by air plenums or air ducting. The air is circulated or re-circulated, filtered, cooled and refreshed with outside air. Our units have a cooling capacity of 100 kW.

The units are safe to operate, are packaged in a complete assembly and feature environmentally sensitive operation. Air coolers or air conditioners may be used to maintain critical temperatures in telecoms server rooms, keep staff and storage areas cool, or perform process cooling in industry. And they can keep tents or temporary locations cool in warm climates.

Chiller specifications

Our contained, packaged chiller rental solutions provide chilled liquid for process cooling or temperature control. The units transport cold fluid through flexible hoses to distribution devices. We have an extensive range of air and water cooled chiller hire solutions available for rent.

The units are quiet, easy to operate and equipped with a remote monitoring system. Our chiller hire equipment can easily be combined with air handlers and fan coils for optimum cooling solutions.

Technical information

Model		EC50	EC100	EC250
Cooling capacity ¹ (+30 Ambient)	kW	56	105	258
Built-in pump	-	Yes	Yes	Yes
Power supply	V/Ph/Hz/PE	400/3/50/PE	400/3/50/PE	400/3/50/PE
Power connection	-	CEE 63A (5-pole)	CEE 125A (5-pole)	M12
Power consumption (at +30 ambient, excl. pump)	kW	17.9	30.1	71.5
Pump power (Max.)	kW	3	5.5	11
EER (excl. pump) ¹ (at +30 ambient)	-	13.3	3.49	3.61
Power protection (fuse)	A	63	125	250
Hydraulic connections (DIN11851)	DN [mm]	50	50	80
Max. Starting current	A	64	17	24
Fluid temperature range cooling	°C	-5 / +12	-10 / +12	-12 / +12
Dimensions [LxWxH]	mm	2275x1200x2020	3240x1200x2110	2991x2438x2438
Full operational weight	kg	1340	1895	3560
Forklift pockets	-	Yes	Yes	Yes
Max. Sound pressure @ 10 m	dBA	48	52	64
Recommended Pon Energy Rental genset size	kVA	135	135	135

Model		EC275	EC550	EC800
Cooling capacity ¹ (+30 Ambient)	kW	284	541	842
Built-in pump	-	Yes	Yes	Yes
Power supply	V/Ph/Hz/PE	400/3/50-60/PE	400/3/50-60/PE	400/3/50-60/PE
Power connection	-	M12	M12	M12
Power consumption (at +30 ambient, excl. pump)	kW	80.3	146	230
Pump power (Max.)	kW	3.54	18.5	18.5
EER (excl. pump) ¹ (at +30 ambient)	-	3.70	3.70	3.66
Power protection (fuse)	A	250	400	630
Hydraulic connections (DIN11851)	DN [mm]	100	100	2x100
Max. Starting current	A	0	3	0
Fluid temperature range cooling	°C	-15 / +15	-12 / +15	-12 / +15
Dimensions [LxWxH]	mm	2991x2434x2724	6058x2438x2720	7090x2438x2720
Full operational weight	kg	3650	7900	9150
Forklift pockets	-	Yes	Yes	Yes
Max. Sound pressure @ 10 m	dBA	60	60	67
Recommended Pon Energy Rental genset size	kVA	150	250	500 (350)

Details are given for guidance only. Exact equipment may vary according to geographical location and availability.

1. Cooling capacity based on 12/7°C water temperature | +30°C air ambient

The majority of our rental solutions is equipped with remote monitoring.

Cooling tower specifications

All electric

Our cooling towers have a design capacity of approx. 2MW. The units are used to cool down your process water within a wide range of water and ambient air temperatures.

Cooling towers use the principle of ambient air to cool down the process water. With a minimum use of power and a high cooling capacity it is a cost and energy efficient solution.

The units are easy to transport and install and can operate stand-alone, modular and/or in combination with an external pump. If required, the units can be placed on a platform for easy access and safe operation.

We value people's safety. To eliminate risks, a legionella prevention plan and water treatment plan need to be in place before start of the project.

Cooling towers

Technical information

Model		CT 2000
Cooling capacity ¹	kW	1859
Power supply	V/Ph/Hz/PE	400/3/50-60/PE
Power connection	-	CEE 63A (5-pole)
Max. Power consumption	kW	31
Power protection (fuse)	A	63
Max. Starting current	A	1
Max. Running current	A	58
Max. Air flow	m3/h	10 800
Min. / Max. Fluid flow rate	m3/h	111 / 320
Max. Fluid inlet temperature	°C	45
Hydraulic connections (flanges)	-	200 / 10 DN / PN
Dimensions [LxWxH]	mm	6605x2544x2785
Transport weight	kg	4450
Full operational weight	kg	6600
Forklift pockets	-	Yes
Built-in pump	-	No
Max. sound pressure level @ 15m	dB(A)	65
Remote monitoring	-	Yes
Recommended Pon Energy Rental genset size	kVA	60

Details are given for guidance only. Exact equipment may vary according to geographical location and availability.

1. Fluid Flow Rate: 320 m3/h, Entering Fluid Temp: 34°C, Leaving Fluid Temp: 29°C, Entering Air Wet Bulb Temp: 21°C

Consult your Pon Energy Rental application engineer for any other operation condition.
